## Outlook

In May, prices decreased due to increased supply in an already flooded market as several companies ramped up production amid lower raw material costs. In June, international prices increased as the market remained optimistic about the outlook for demand amid growing signs that the world's top steel producer, China, would introduce more economic stimulus. Domestic prices decreased due to lower raw material costs. In July, prices increased due to the improvement of the credit policy in China and the expectation that Chinese authorities will ease mortgage restrictions to restart the economic recovery. In August, prices decreased due to the threat of limited steel production in China, the lack of economic incentives from the Chinese authorities, and excess supply from Brazil and Australia. In September, prices increased due to increasing demand from Chinese steel mills and increasing steel demand from the construction industry. In October, International prices remained relatively stable. In November, prices increased owing to improving sentiments in the Chinese market, reducing Chinese inventory and a lower-than-expected supply from Australia and Brazil. In December, prices remained stable. In January, prices increased due to an increased demand from Chinese steel manufacturers.

## Outlook

In April, prices decreased due to a negative correction in coal and coke prices. In May, domestic prices plummeted as coking coal prices fell by almost 15%. International prices decreased due to subdued steel demand caused by high inflation and liquidity crunch. In June, prices remained relatively stable. In July, prices fell due to sufficient supply and weak demand coupled with the decline in coke and steel prices. In August, prices remained relatively stable. In September, prices increased due to a sharp increase in prices of raw materials and an increase in the price of coking coal. In October, prices decreased due to sluggish offtakes from steel manufacturers coupled with discounts on payment conditions due to cash crunch, especially in the domestic market. In November, international prices surged due to an increase in the price of iron ore, higher domestic demand in Europe, and a tightening of supply from Brazil. Domestic prices fell in tandem with coking coal. In December, international prices increased due to an increase in the price of coking coal coupled with improved demand and declining output from China. Domestic prices decreased as steel producers didn't purchase raw materials due to healthy inventories. In January, prices rose due to shortage of supply coupled with the increase in price of raw materials

## Outlook

In June, prices decreased due to limited demand and sluggish global trends. In July, international prices remained stable. Domestic prices continued to fall due to reduced demand, a drop in prices of raw materials, and decreased blast furnace activity. In August, prices increased due to the increase in price of coking coal. In September, international prices decreased as the inflation rate increased across major European nations leading to decreased demand. Domestic prices increased due to an increase in prices of raw materials. In October, international prices decreased due to the high inflation rate across major European nations leading to decreased demand. Domestic prices decreased due to sluggish demand from steel manufacturers. In November, international prices increased with a surge in iron ore prices. Domestic prices reduced due weak domestic demand coupled with decreasing coking coal prices. In December, international prices increased as manufacturers looked to replenish stocks amidst speculation of interest rate cuts by the US Fed. Domestic prices fell in tandem with the steel prices. In January, international prices increased due to an increase in price of raw materials. Domestic price fell due to weak demand from the domestic steel industry.

## Outlook

In June, prices decreased as demand continued to be subdued as customers across sectors resorted to 'wait-and-watch' or 'need-based buying' along with a decrease in coking coal prices. In July, the prices remained relatively stable. In August, international prices dropped due decrease in prices of raw materials, lack of demand, and overall negative macroeconomic conditions. Domestic prices remained relatively stable. In September, international prices remained stable. Domestic prices increased due to strong demands from the construction and kitchen appliances industries. In October prices remained relatively stable. In November, international prices remained relatively stable. Domestic prices were reduced due to a decreased demand from the construction sector in Northern India as a result of a halt on construction activity due to pollution as part of the gov't's graded action plan. In December, prices increased over speculations for interest rate cuts causing increased demand. Domestic prices remained relatively stable. In January, international prices increased due to a surge in prices of raw materials. Domestic prices remained relatively stable.

\*The actual prices may vary depending on city, player, grade etc.

## Outlook

. International prices decreased due to a lack of demand, negative market sentiment influenced by the uncertainty of the Chinese market, and negative macroeconomic factors. In July, the prices continued to drop carrying the momentum from previous months due to slowing global demand. Domestic prices dropped due to cheap imports and softer input costs. In August, international prices decreased due drop in prices of raw materials, lack of demand, and overall negative macroeconomic conditions. Domestic prices remained relatively stable. In September, international prices remained stable. Domestic prices increased due to an increase in prices of raw materials like chromium and pig iron. In addition to this, heavy demand from domestic industrial and kitchen appliance manufacturers impacted the price. In October, prices remained relatively stable. In November, prices remained relatively stable. In December, prices increased in tandem with increasing coking coal prices, increase in price of raw materials and improved market sentiments. Domestic prices decreased as a result of weak demand from the construction industry. In January, international prices due to an increase in price of raw materials and coking coal. Domestic prices fell in tandem with steel prices.

\*The actual prices may vary depending on city, player, grade etc.

## Outlook

In December and January, prices increased due to low availability during the winter period, as adverse weather conditions slowed down the collection and processing of scrap. In February, prices decreased due to the consequences of the Turkey-Syria earthquake. In March, prices increased due to inclement weather, low inventories, a reported shortage of prime steel scrap substitute DRI, and rising finished steel prices. In April, prices increased slightly due to tight supply caused due to supply chain issues in Turkey. In May, prices decreased due to a decrease in steel prices and declining import offers. In June, prices remained relatively stable. In July, prices fell due to higher VAT and excise duty on fuel in Turkey coupled with reduced demand due to the global economic slowdown. In August, prices increased due to an increase in the price of coking coal. In September, prices increased due to an increase in prices of iron ore and coking coal. In October, prices decreased due to slower offtake in finished steel amid sufficient restocking earlier amid the festive season, a decrease in prices of competing raw materials like sponge and billets affecting market sentiments and the import of cheaper melting scrap from Europe. In November, prices remained relatively stable. In December, prices remained relatively stable. In January, prices remained stable.

## Outlook

. In July, prices dropped due to uncertainty over steel production in China, a drop in prices of raw materials, and sluggish demands from the end consumer. In August the prices increased due to the launch of a new round of chrome ore futures transactions and strong demand from south China steel plants. In September, International prices increased due to sharp increase in prices of raw materials, increase in price of coking coal, and strong demand from Chinese steel manufacturers. Domestic prices increased due to market anticipation of an increase in prices due to elevated premiums in OMC's chrome ore auction and FACOR's lumps auction after more than a month-long gap. In October, prices decreased owing to reduced demand both globally and domestically, caused by a fall in stainless steel production. In November, international prices fell in tandem with decreased raw material prices. Domestic prices declined due to restricted demand from the stainless steel sector. In December, international prices increased as a result of reduced supply from China and Mongolia. Domestic prices remained relatively stable. In January, international prices remained relatively stable. Domestic prices rose due to an increase in prices of raw materials and the price of coking coal.

## Outlook

In March, prices decreased due to sluggish demand and oversupply at the producers. In April, prices rose due to an increased supply crunch in the domestic (labor issue in Bhutan) and global markets (power curtailment in the Ningxia region of China). In May, international prices fell in tandem with iron ore and coking coal prices. Domestic prices increased due to low production caused by power outages in northeast India, a major production center. In June, prices dropped on account of higher supplies, and sluggish steel demand amid intense bargaining in the market and low coking coal prices. In July, prices dropped due to uncertainty over steel production in China, reduced prices of raw materials, and sluggish demands from the end consumers. In August, international prices remained relatively stable. Domestic prices decreased because of low demand, and delay in price announcement from Bhutan which created uncertainty in the market. In September, prices remained relatively stable. In October, prices remained relatively stable. In November, prices remained relatively stable. In December, prices fell as a result of weakening demand from steel manufacturers. In January, international prices remained relatively stable. Domestic prices increased due to a rise in demand for manufacturing solar-grade silicon.

## Outlook

In October, prices remained stable. In November, prices fell due to concerns over an impending global recession and geo-political unrest, leading to a decline in demand and a downturn in the metal cycle. In December, prices fell due to the higher availability of stocks caused by a slowdown in export markets and global recessionary pressures. In January, prices decreased in tandem with stainless steel prices. In February, prices remained stable. In March, prices rose in tandem with elevated raw material and energy costs. In April, prices increased slightly due to a positive market outlook. In May, prices decreased in tandem with coking coal prices. In June and July, prices decreased as Chinese steel mills continued dumping alloy steel into Indian markets due to a shortage of customers in China leading to oversupply. In August, prices decreased due to the decrease in the price of raw materials. In September, prices remained relatively stable. In October, prices increased as a result of higher demand for EN8 in the production of automotive axles. In November, prices decreased due to reduced prices of raw materials (silicon). In December, prices rose as a result of an increase in prices of raw materials (silicon) caused by the shortage of supply from silicon plants in Yunnan and Sichuan provinces in China. In January, prices remained relatively stable.

\*The actual prices may vary depending on city, player, grade etc.

## Outlook

In April and May, prices decreased due to a drop in raw material prices, rising stock levels, higher interest rates impeding downstream construction & automotive sector, and fears of recession. In June, prices fell due to sluggish demand in the traders' market amid need-based procurement, low demand from end consumers due to inflation, and high energy prices. In July, prices remained relatively stable. In August, HR coil prices increased due to higher demand, especially from the construction industry. CR coil prices remained relatively stable as demand decreased in Asian markets, so did the supply from European markets. In September, prices increased due to an increase in prices of raw materials and an increased demand from the construction sector. In October, prices decreased owing to a multitude of factors, such as reduced construction in northern India due to pollution, elections in various states impacting the liquidity of the market, and the festive season. In November, prices fell due to reduced demand from the construction and infrastructure sector amidst winter in the northern hemisphere and due to ample supply of raw materials (Nickel) leading to decreased prices. In December and January, prices reduced as a result decrease in demand from the construction sector coupled with a decrease in prices of raw materials.

Nov-23	69250
Dec-23	70600
Jan-24	71000

\*The actual prices may vary depending on city, player, grade etc.

## Outlook

In December, prices declined due to a slowdown in export markets amid global recessionary pressures. In February, prices remained stable. In March and April, prices rose in tandem with production costs- higher energy and steel scrap prices. In May, prices decreased in tandem with steel scrap and coking coal prices. In June, prices continue to spiral down, primarily driven by the demand weakness in China and falling coking coal prices. In July, prices fell due to consecutive downward corrections driven by high input costs, particularly expensive coal, and iron ore supplied by Odisha Mineral Corporation. In August, prices decreased due to reduced demand from the automotive industry and a decrease in the price of raw materials. In September prices remained relatively stable. In October, prices increased due to an increase in the production of pistons, boxes, spindles, gears, and camshafts for 3-wheelers. In November, prices decreased as the prices of raw materials like ferro chrome and ferro manganese fell. In December, prices rose as a result of an increase in production of gears, especially for 2Whs and 3Whs. In January, prices remained relatively stable

## Outlook

In April, prices increased because of spurred consumption due to a lower US Dollar and power cuts in China affecting Aluminium smelters. In May, domestic prices remained relatively stable. International prices decreased as output increased and inventories rose amid tepid demand for the metal used in the auto, packaging, and construction sectors. In June, prices decreased as demand from some end-user sectors like construction remained tepid amid the ongoing high-inflation environment and poor economic conditions in Europe and Germany entering into a recession. In July, international prices increased due to high demand caused by the stimulus pay in China. Domestic prices continued the downward trend due to reduced demand in the local markets. In August international prices decreased due to decreased demand, increased supply of cheaper Chinese goods and a surplus of Russian metal due to self-sanctions by US and European entities. In September, prices increased as US dollar index eases on the Aluminium market, property supportive policies in China and lack of inventories. In October, prices remained relatively stable. In November, prices remained relatively stable. In December, prices remained relatively stable. In January, prices remained relatively stable.

## Outlook

In March, international prices decreased due to inflation in the US in a downward trend, with market players betting on the US Fed to slow down interest rate hikes and weak supply. In April, international prices continued a downward trend due to weak global demand caused by rising interest rates, high inventories, and a global slowdown. Domestic prices remained relatively stable. In May, prices continued a downward trend due to contracting manufacturing activity and slumping industrial profits in China. In June, international prices rose supported by a vote of approval from the U.S. House of Representatives to suspend the debt ceiling and improvement in the fundamentals of copper as an EV green energy metal. Domestic prices remained stable. In July, the prices gained upward momentum due to increased demand among Chinese consumers. In August, prices remained relatively stable. In September, prices remained relatively stable. In October prices continued to fall amidst concerns over lower demand and high inventories piling up. In November, prices rose on the back of expectation of interest rates cut moving forward leading to increased economic activity. In December, international prices rose as a result of shortage of supply from China and Peru. Domestic prices remained relatively stable. In January, prices remained relatively stable.

## Outlook

In February prices tumbled due to the potential for a significant supply recovery and a return to zinc surplus after two years of shortfall. In March, prices fell as a result of continuing concerns about global economic growth, lack of momentum from China, weak manufacturing activity in the USA, and a stronger dollar. In April, prices plummeted due to the flagging global economy, vulnerable US banking sector, and higher inventory levels, and resumed operations in France's smelters. In May, prices fell due to interest rate hikes, dollar strength, an increase in smelter supply, and a weaker-than-expected economic recovery in China -- biggest consumer of zinc. In June, prices declined due to weak demand, coupled with an increase in smelter and sluggishness in the steel sector, which impacted the demand for galvanizing. In July, prices remained relatively stable. In August, prices remained relatively stable. In September, prices increased due to increased demands from construction and infrastructure sector, especially in China, the largest producer of Zinc. In October, prices decreased slightly amidst increasing supply globally. In November, prices rose amidst tightening global supply. In December, prices fell due to a drop in demand from steel industry. In January, prices remained relatively stable.

## Outlook

Domestic prices remained relatively stable. In May, international prices continued a downward trend due to slower global activity, low growth in China's property sector due to high debt levels, and only services-oriented recovery in China. Domestic prices remained stable. In June, international prices increased as the peak lead acid car battery replacement season of summer commenced coupled with high demand from the EV industry. Domestic prices remained relatively stable. In July, prices remained relatively stable. In August, prices increased due to shortage of supply which is caused by shortage of battery scrap. In September, prices increased due to a global shortage of supply caused by reduced Chinese exports and ongoing mine disruptions, especially the Penasquito strike in Mexico. In October, International prices decreased due to reduced demands from EV battery manufacturers, as a result of a tentative geopolitical outlook. Domestic prices remained relatively stable. In November, prices increased due to increased demand from lead acid battery manufacturers. In December, prices dropped as a result of decrease in demand from battery manufacturers and a surplus supply of lead. In January, international prices have experienced an upward resurgence concurrent with the revival in demand for car batteries. Domestic prices remained relatively stable,

## Outlook

In February, prices tumbled on expectations of easing supply tightness. In March, international prices fell due to concerns about the impact of Tsingshan's planned production switch. In April, international prices increased as the US dollar index weakened, and low inventory levels of refined nickel. In May, International prices decreased after the release of disappointing trade data from top industrial metals consumer China. In June, international prices continued a downward trend as global production volumes rose while the market remained in surplus. In July, international domestic prices continued a downward trend due to subdued demand in major economies and increased Indonesian supply. In August, prices decreased due to underwhelming stimulus measures from China. In September, prices decreased due to excess supply from Australia and Indonesia. In October, prices fell sharply due to reduced demand from stainless steel manufacturers. In November, prices continued the downward spiral due to increased supply from Indonesia and weakening demand from stainless steel sector. In December, prices decreased due to weakened demand from stainless steel manufacturers. In January, prices dropped in tandem with the prices of stainless steel.

\*The actual prices may vary depending on city, player, grade etc.

## Outlook

In March, prices fell as the global demand outlook fell substantially on weakening macroeconomic fundamentals, a strengthening US dollar, and still high levels of global inflation. In April, prices increased as tin mining was suspended in Myanmar- the world's third-largest tin producer. In May, prices fell as the global demand outlook fell substantially on weakening macroeconomic fundamentals. In June, prices increased because of a looming supply crunch in the global tin market as Myanmar, the world's third-largest tin producer announced a suspension of tin mining activities, and Indonesia, the world's largest exporter of tin, announced a proposed ban on the exports of tin ingots. In July, the prices remained stable. In August, prices decreased in August primarily due to rising inventories and reduced demand from the electronics industry. In September, prices decreased due to reduced demand from Semiconductor industry amidst tentative geopolitical outlook. In October, prices decreased owing to reduced demand – as the production of steel declined so did the demand for tin in steel coating. In November, prices decreased due to adequate supply and subdued demand. In December and January, prices increased as a result of rise in demand of tin for manufacturing of EVs.

## Outlook

In August Platinum prices dropped due to reduced demands from the automotive industry. Palladium and Rhodium prices remained relatively stable. In September, prices remained relatively stable. In October, Platinum and Palladium prices fell due to inhibited demand from jewellery manufacturers. Rhodium prices increased due to increased demand from the automobile sector as a result of stricter environmental regulations and advancements in the automobile industry. In November, Platinum prices increased due to increased demand from jewellery industry. Palladium prices decreased due to reduced demand from transport equipment (railway coaches, shipbuilding equipments, etc) sector. Rhodium prices decreased due to decreased demand in manufacturing of catalyst converters. In December, platinum prices increased due to an increased demand from jewellery manufacturers. Palladium prices increased due to an increased in demand from transport equipment manufacturers. Rhodium prices remained relatively stable. In January, Platinum prices reduced as the demand for platinum jewellery dropped. Palladium prices dropped as demand from the shipbuilding industry and diamond polishing industry declined. Rhodium prices remained relatively stable.

## Outlook

In May, international, prices remained stable. Domestic prices fell in tandem with crude oil prices. In June, international prices continued to drop with the momentum of sluggish market demands of previous weeks which was aggravated by the European fuel crisis. Domestic prices continued to fall on the back of sluggish market sentiment and surplus product avails in the region, and lower import offers from overseas suppliers. In July, prices remained relatively stable. In August, domestic prices increased due to increased demands from plastic container manufacturing industries. International prices remained relatively stable. In September, prices remained relatively stable. In October, domestic prices decreased due to lower imports caused by sluggish market demand. In November, prices decreased due to increased supply coupled with falling crude oil prices. In December, prices rose as a result of increased market demand. In January, domestic prices rose with a 3% increase in price of crude oil.

## Outlook

In April, prices fell amid falling feedstock costs. In May, prices fell in tandem with crude oil prices. In June, prices declined due to persistently subdued demand sentiment coupled with surplus product avails in the region and a weak macroeconomic environment. In July, prices continued to drop as the market failed to generate demand for the surplus supply condition and a drop in feedstock prices. In August and September, prices increased due to rising demand for lightweight vehicle materials in the automotive sector. In October, prices decreased as a result of lower demand from the construction industry. In November, international prices remained stable. Domestic prices continued to drop with the falling crude oil prices. In December, international prices remained relatively stable. Domestic prices fell in tandem with the price of crude oil. In January, domestic prices increased due to an increase in demand for polypropylene film manufacturing, coupled with an increase in price of crude oil.

Nov-23	1274	116480
Dec-23	1239	112640
Jan-24		

## Outlook

In January and February, prices increased due to stability in production activities, a rise in crude oil prices combined with an increase in feedstock costs (Acrylonitrile and Butadiene), and a recovery in downstream offers. In March and April, prices remained relatively stable. In June, prices declined due to subdued demand, ample supply, and heavily hit consumption as Europe remains hawkish with rate hikes. In July, prices increased due to increased raw material costs (butadiene) and supply cuts from Europe. In August and September, both international and domestic prices increased due to higher demand from medical and electrical equipment manufacturers. In October, prices remained relatively stable. In November, prices dropped as a result of drop in prices of butadiene and styrene. In December, prices decreased due to decreased demand in manufacturing of medical surgery accessories and a drop in prices of butadiene and styrene.

## Outlook

Domestic prices rose on account of the high input cost of coal and crude oil. In November, International prices fell in tandem with crude oil prices. Domestic prices remained stable. In December, prices fell sharply in tandem with the price of crude oil. In January and February, prices increased as crude oil prices stabilized. In March, prices fell in tandem with crude oil prices. In April prices surged in tandem with crude oil prices. In May, prices slumped in tandem with crude oil prices. In June, weak demand led to a surplus supply situation causing a significant price drop. In July, prices remained relatively stable. In August, prices increased due to increase in prices of crude oil. In September, prices increased due to higher demand from the food and beverage packaging industry. In October, prices remained stable. In November, prices decreased as a result of a drop in prices of raw materials (styrene). In December, prices fell due to subdued demand from packaging and household manufacturing units, coupled with a drop in prices of raw materials.

Outlook

In December, prices declined on the back of poor demand from the tyre market, along with the onset of the peak tapping season. In January and February, prices remained relatively stable. In March and April, prices increased due to reduced production from the other major producers of rubber -Thailand, Malaysia, and Indonesia. In May, prices increased slightly in tandem with demand. In June, prices fell amid lingering concerns about faltering demand from top consumer China. In July, prices remained stable. In July prices remained relatively stable. In August, prices decreased to supply of cheaper imported rubber from South-east Asia. In September, prices remained relatively stable. In October, prices rose due to increased demand from the tire industry, especially in China. In November, prices increased due to a shortage of supply caused by heavy rains in south and south-east Asia. In December, prices remained relatively stable. In January, prices increase as consumption outstrips production, leading to import of expensive rubber

## Outlook

In July, prices declined due to decreased prices of its major feedstock (butadiene). In August, international prices increased due to increase in raw material costs (butadiene). Domestic prices remained relatively stable. In September, prices increased due to an increase in price of crude oil. In September, prices increased due to increase in price on Butadiene. In addition to this, price of crude oil and an increased demand from rubber and polymer industry led to an increase in prices. In October, prices increased due supply shortage caused by the maintenance shutdown of styrene and butadiene plants in China. In November, international prices decreased due to weak demand caused by negative macroeconomic conditions. Domestic prices continued to increase amidst higher demand for 2w and 3w tire production. In December, prices fell due to a sharp decline in crude oil prices. In January, prices remained relatively stable.

## Outlook

In March, prices increased as the automotive industry recovered from the semiconductor crisis. In April prices remained relatively stable. In May, prices plummeted in tandem with crude oil prices. In June, the prices dropped due to the underperformance of the tire industry, the stable manufacturing sector, reduced feedstock costs, and surplus inventories. In August, prices increased due to an increase in the price of raw materials (butadiene) and an increased demand from the tire industry. In September and October, prices increased due to the increase in prices of Butadiene. In addition to this, the price of crude oil and an increased demand from the rubber and polymer industry led to an increase in prices. In November, prices fell in tandem with the falling crude oil prices. In December, prices dropped as a result of reduced crude oil prices. In January, international prices remained relatively stable. Domestic prices fell as result of drop in prices of butadiene and styrene.

Aug-23	229
Sep-23	228
Oct-23	233
Nov-23	233
Dec-23	229
Jan-24	223

## Outlook

Prices have been on a decline after the auto industry was hit first by the semiconductor chip shortage followed by the general economic downturn. The price war initiated by Tesla in China to destock inventories and reduce production also has taken its toll on EPDM consumption. In May, prices decreased in tandem with crude oil prices. In June, prices continued to fall despite easing supply chain constraints, lower shipping container costs, and fewer berth delays. In July, the price drop was attributed to a consistent fall in the prices of feedstock ethylene and propylene for several weeks, as a result, the manufacturing cost of EPDM rubber was substantially reduced, leading to lower market prices. In August, prices decreased due to falling ethylene and propylene feedstock prices, which in turn reduced manufacturing costs. In September, prices remained relatively stable. In October, prices rose due to an increase in prices of ethylene and propylene. In November, prices remained stable. In December, prices fell in tandem with a decrease in price of ethylene. In January, prices dropped due to a lack of demand from the construction industry.

Sep-23	123
Oct-23	117
Nov-23	116
Dec-23	116
Jan-24	116

## Outlook

Multiple sanctions on Russia, a key carbon black exporter, have added pressure on supplies. Rising wage costs and the government’s tab on rising pollution have restrained supply in China as well, further affecting supply. In May, prices remained relatively stable. In June, prices decreased on account of low demand from the end-consumer. In July, the prices continued to plummet with greater momentum as demand from end-consumer remained constant, increased cost of production, surplus inventories and economic slowdown in China. In August, prices increased due to stricter Chinese environmental regulations led to reduced Chinese exports, causing price surges. In addition to this, increased production in the tire and rubber industry also led to increased demand. In September, prices increased due to increased demand from tire industry and reduced imports. In October, prices decreased due a decrease in the price of oil, combined with sluggish local demand. In November, prices remained stable. In December prices remained stable. In January, prices remained relatively stable.

<b>Zinc</b>	<p>LME</p> <p>-Special high-grade zinc of 99.995% purity (minimum) must conform to the chemical composition of one of the following standards:</p> <ul style="list-style-type: none"> <li>•BS EN 1179:2003 - 99.995% grade</li> <li>•ISO 752:2004 - ZN-1 grade</li> <li>•ASTM B6-12 - LME grade</li> <li>•GB/T 470-2008 - Zn99.995 grade</li> </ul>	<p>NCDEX, MCX (July’19 onwards)</p> <p>- Zinc of 99.995% minimum purity. Zinc must conform with the 99.995% graded chemical composition of BS EN 1179:1996 Standard</p> <p>entitled “Zinc and Zinc alloys primary Zinc”</p> <p>Form: ingots</p>
<b>Lead</b>	<p>LME</p> <ul style="list-style-type: none"> <li>- Lead of 99.97% purity (minimum) conforming to BS EN 12659:1999</li> <li>- GB/T 469/2005</li> </ul>	<p>MCX</p> <ul style="list-style-type: none"> <li>- Lead ingots with minimum purity of 99.97%</li> </ul>

# Commodity Specifications

Commodity	International	Domestic
<b>Nickel</b>	LME - Nickel of 99.80% purity (minimum) conforming to B39-79 (2013) - GB/T 6516-2010	NCDEX, MCX (July'19 onwards) - 4"*4" approved pure cut Nickel of 99.80% purity (minimum)
<b>Tin</b>	LME - Tin of 99.85% purity (minimum) conforming to BS EN 610:1996	Bloomberg - Tin (min 99.85% ) \$/tonne
<b>Platinum</b>	Metal in sponge form with minimum purities of 99.95% for platinum and palladium, and 99.9% for rhodium	
<b>Palladium</b>		
<b>Rhodium</b>		
<b>Low density polyethylene (LDPE)</b>	International price (C&F FEA) \$/tonne	RIL-16MA400 grade
<b>Polypropylene (PP)</b>	International Price (PPHP) \$/tonne	RIL-D120MA grade
<b>Acrylonitrile Butadiene Styrene (ABS)</b>	International price (C&F FEA) \$/tonne	Landed Cost Rs/tonne
<b>High Impact Polystyrene (HIPS)</b>	International price \$/tonne	Landed Cost Rs/tonne
<b>Rubber Prices</b>	NA	NCDEX/Rubber board - RSS 4 (Ribbed Smoked Sheet 4) ex-warehouse Kochi exclusive of all taxes
<b>Styrene Butadiene Rubber (SBR)</b>	International Price Index (Base Price: \$ 2,825-2,875 per tonne)	Landed Cost Rs/kg
<b>Polybutadiene Rubber (PBR)</b>	International price Index (Base Price: \$ 2,730-2,780 per tonne)	Landed cost Index (Base cost: Rs 207,000 - 211,000 per tonne)
